- For horizontal installation in a standard double installation case

Additional terminal VO-ZT

- Plastic cover in colour RAL 9010
- Membrane keypad
- 8 cancel buttons, each with a call LED.
- 2 description tags
- For horizontal installation in a standard double installation case

When rapid assistance is required

The VISO-OPT PLUS emergency call system enables people requiring assistance to raise the alarm at a central location within a building or building complex.

The system can be used in many areas, e.g.:

- Emergency call systems in bathrooms in hotels;
- Emergency call systems for disabled toilets in public buildings, schools etc.
- Call systems for changing rooms in outpatient departments, doctors surgeries etc.

System components:

- Modular display and acknowledgment key panel (for 4 to 124 call locations).
- External call button / pull button for each call location.
- Power supply: 24V-DC or 24V-AC depending on choice; According to which option is chosen there are different types of devices available.
- Optional: External cancel button and room signal lamps, which can be incorporated into the general concept.

Permanent surveillance

If external buttons from our VISOCALL PLUS nurse-call system range are used, then the emergency call system is classed within operating range A in accordance with VDE0834/Part 1. In this instance VISO-OPT PLUS monitors the individual call transmission circuits around the clock and is able to automatically recognise and signal possible faults.

VISO-OPT PLUS emergency call system.

Call button RT

- Plastic cover in colour RAL 9010
- Membrane keypad with a call button
- Variable wiring of key contacts for closed circuit monitoring
- Call control LED
- For installation in a standard installation case
