

Kelio^{VISIO}

Ultra-customisable
clocking terminals designed
from a user's perspective

Bodet Software have designed a range of revolutionary smart terminals to meet all your human resources requirements. The Kelio^{VISIO}×7 and Kelio^{VISIO}×4 terminals are simple, intuitive and fully customisable.

An effective terminal

Easy to use

The Kelio^{VISIO} terminals have been designed to make recording your attendance time as simple and intuitive as possible. Their stylish user-led design means that it is easy to quickly master their potential. The touch screen makes navigation straightforward and employees are assisted by an easy to use clocking area and audible tone.

Clear real-time results

To adapt to all requirements, the Kelio^{VISIO} offers a large choice of user interface customisations. The real-time results can be displayed in the form of a graph to make them more readable and easier to understand.

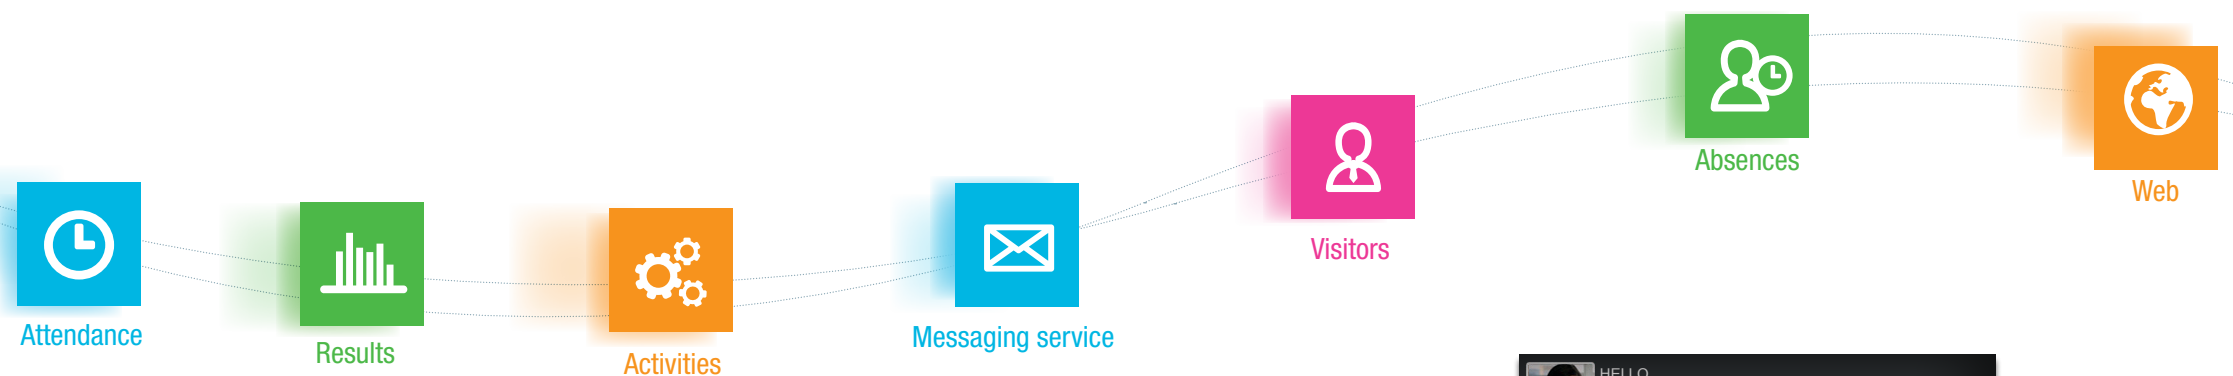

Visual verification

The Kelio^{VISIO} terminals can be equipped with a camera so a photograph can be taken of everyone who clocks in and out. Managers can therefore check the identity of the terminal user, adding an additional layer of verification.

Kelio VISIO

A scalable terminal

The new Kelio VISIO⁷ and Kelio VISIO⁴ have been designed to benefit employees as much as managers and HR administrators.

Optional features can include enabling employees to check their own time & attendance results, displaying company bulletins and individual employee messaging. By using these functions staff can get much more out of the Visio range of terminals than traditional clocking in machines.

Enabling employees to use these features can also help to create an engaged workforce by improving communication and empowering employees to self-manage.

A user-friendly terminal

Ultra-customisable

The Kelio^{VISIO}×7 and Kelio^{VISIO}×4 terminals have been designed to be totally customisable. You can choose the wording, icons, colours and screen backgrounds so that the terminal is in keeping with your organisation's branding and requirements. This is a total revolution in the human resources field.

Technical characteristics

VISIO×4

VISIO×7
